

CAPTURE THE FLAG

🚩 Flag 1 – Install Flutter SDK

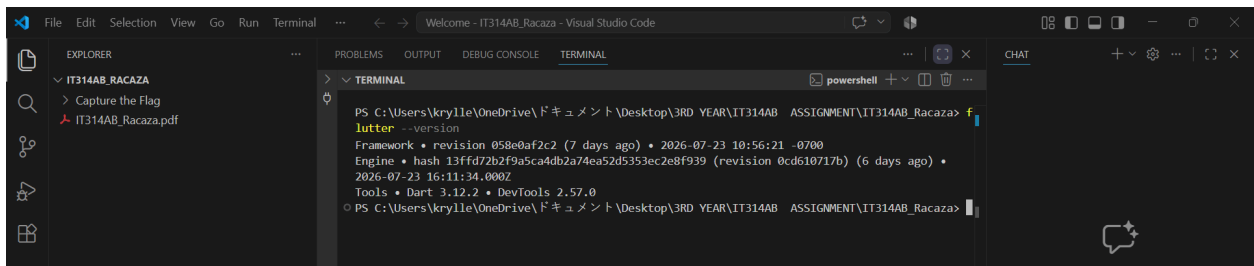

Objective: Install the Flutter SDK.

Verify:

```
flutter --version
```

Screenshot:

- The results of the command

The screenshot shows the Visual Studio Code interface with a terminal window open. The terminal is running a PowerShell session. The command `flutter --version` has been executed, and the output is displayed. The output shows the Flutter framework version, the Dart engine version, and the DevTools version.

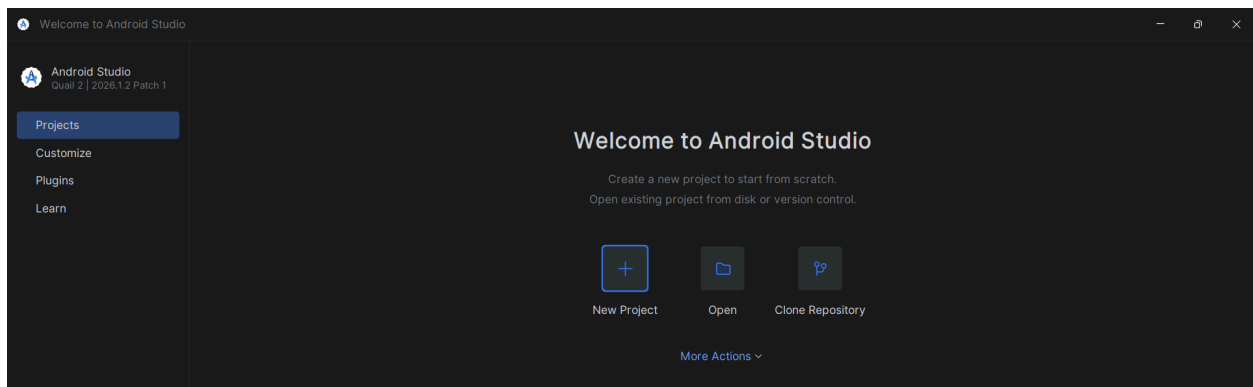

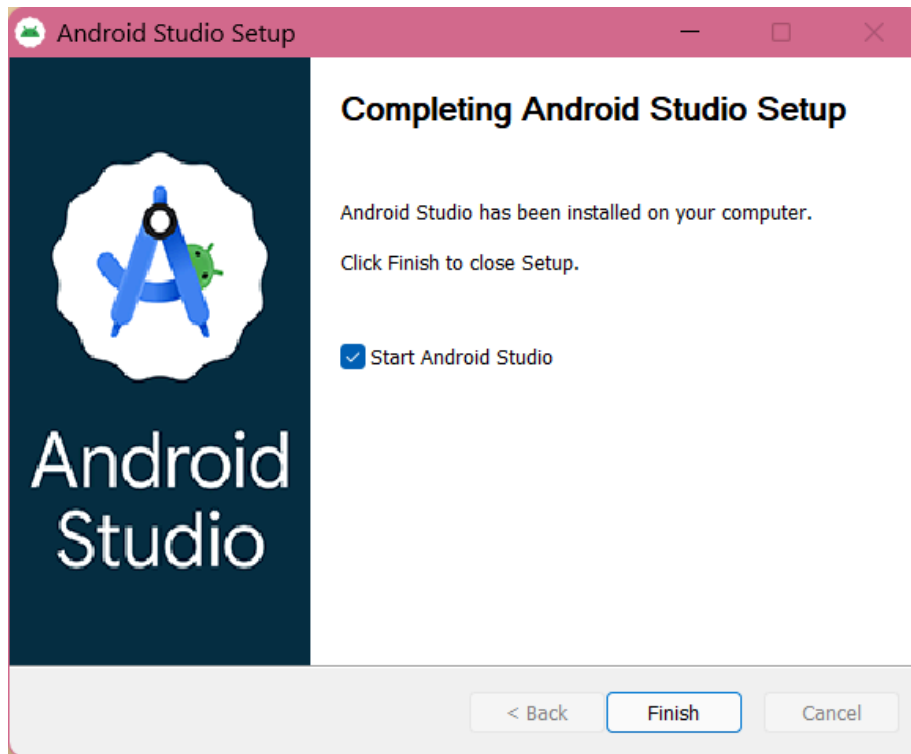

```
PS C:\Users\krylle\OneDrive\ドキュメント\Desktop\3RD YEAR\IT314AB ASSIGNMENT\IT314AB_Racaza> flutter --version
Flutter • revision 058e0af2c2 (7 days ago) • 2026-07-23 10:56:21 -0700
Engine • hash 13fffd72b2f9a5ca4db2a74ea52d5353ec2e8f939 (revision 0cd610717b) (6 days ago) • 2026-07-23 16:11:34.000Z
Tools • Dart 3.12.2 • DevTools 2.57.0
```

🚩 Flag 2 – Install Android Studio

Objective: Install Android Studio.

Screenshot:

- Android Studio installed
- SDK Manager opened (or Welcome screen)

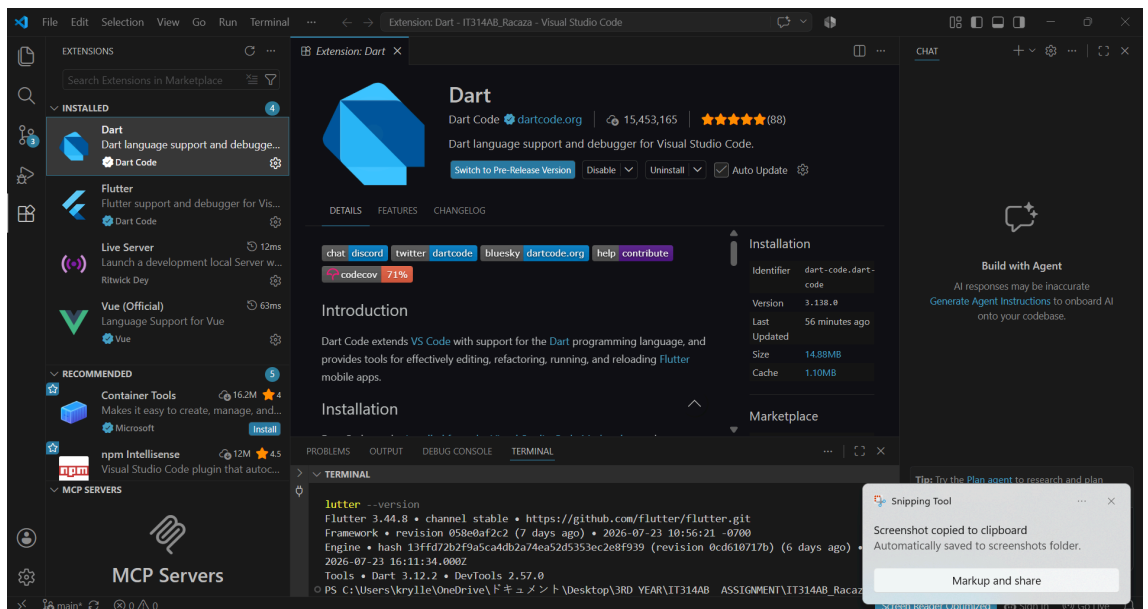

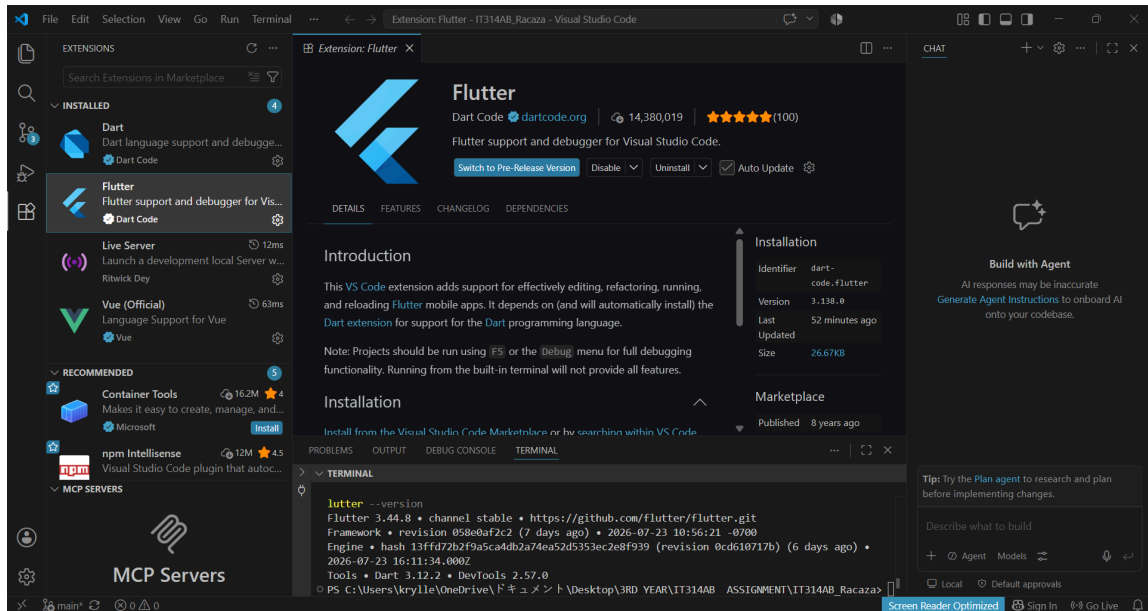

🚩 Flag 3 – Install VS Code & Flutter Extension

Objective: Install VS Code and the Flutter (which also installs Dart) extension.

Screenshot:

- Flutter extension installed
- Dart extension installed (or shown as installed)

🚩 Flag 4 – Run Flutter Doctor

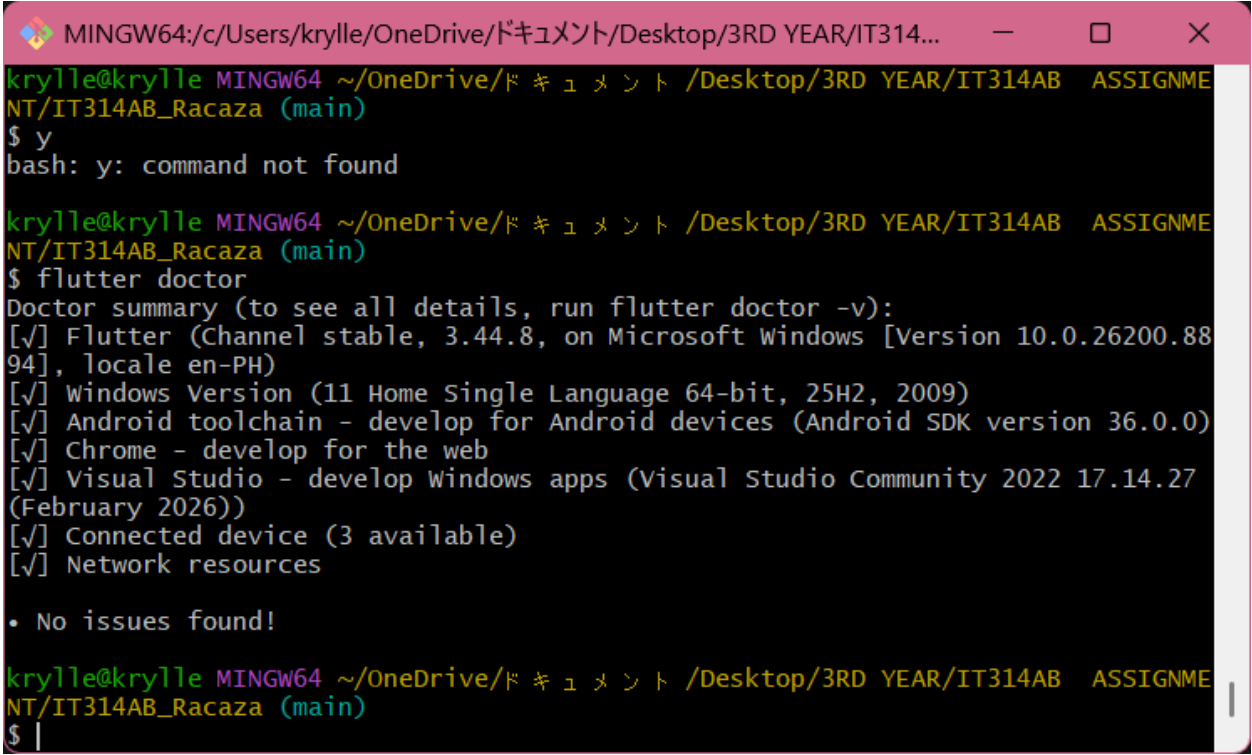

Objective: Check whether everything is configured correctly.

Run:

```
flutter doctor
```

Screenshot:

- flutter doctor results

```
MINGW64:/c:/Users/krylle/OneDrive/ドキュメント/Desktop/3RD YEAR/IT314AB ASSIGNME
krylle@krylle MINGW64 ~/OneDrive/ドキュメント/Desktop/3RD YEAR/IT314AB ASSIGNME
NT/IT314AB_Racaza (main)
$ y
bash: y: command not found

krylle@krylle MINGW64 ~/OneDrive/ドキュメント/Desktop/3RD YEAR/IT314AB ASSIGNME
NT/IT314AB_Racaza (main)
$ flutter doctor
Doctor summary (to see all details, run flutter doctor -v):
[✓] Flutter (Channel stable, 3.44.8, on Microsoft Windows [Version 10.0.26200.88
94], locale en-PH)
[✓] Windows Version (11 Home Single Language 64-bit, 25H2, 2009)
[✓] Android toolchain - develop for Android devices (Android SDK version 36.0.0)
[✓] Chrome - develop for the web
[✓] Visual Studio - develop Windows apps (Visual Studio Community 2022 17.14.27
(February 2026))
[✓] Connected device (3 available)
[✓] Network resources

• No issues found!

```

🚩 Flag 5 – Build Your Virtual Device

Objective: Create your first Android Emulator (AVD).

Screenshot:

- Device Manager
- Your newly created virtual device
- Emulator successfully booted

🚩 Flag 6 – Forge Your Project

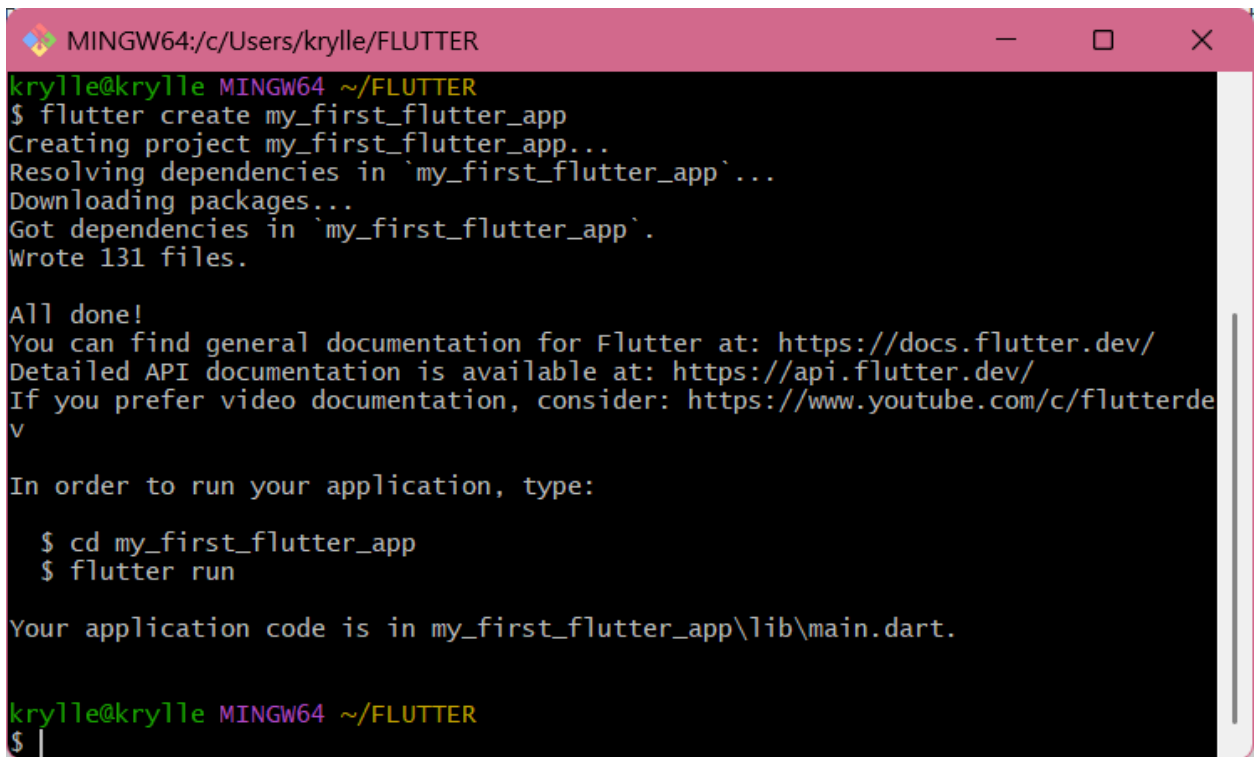

Objective: Create your first Flutter project.

Run:

```
flutter create my_first_flutter_app
```

Screenshot:

- Successful creation of project

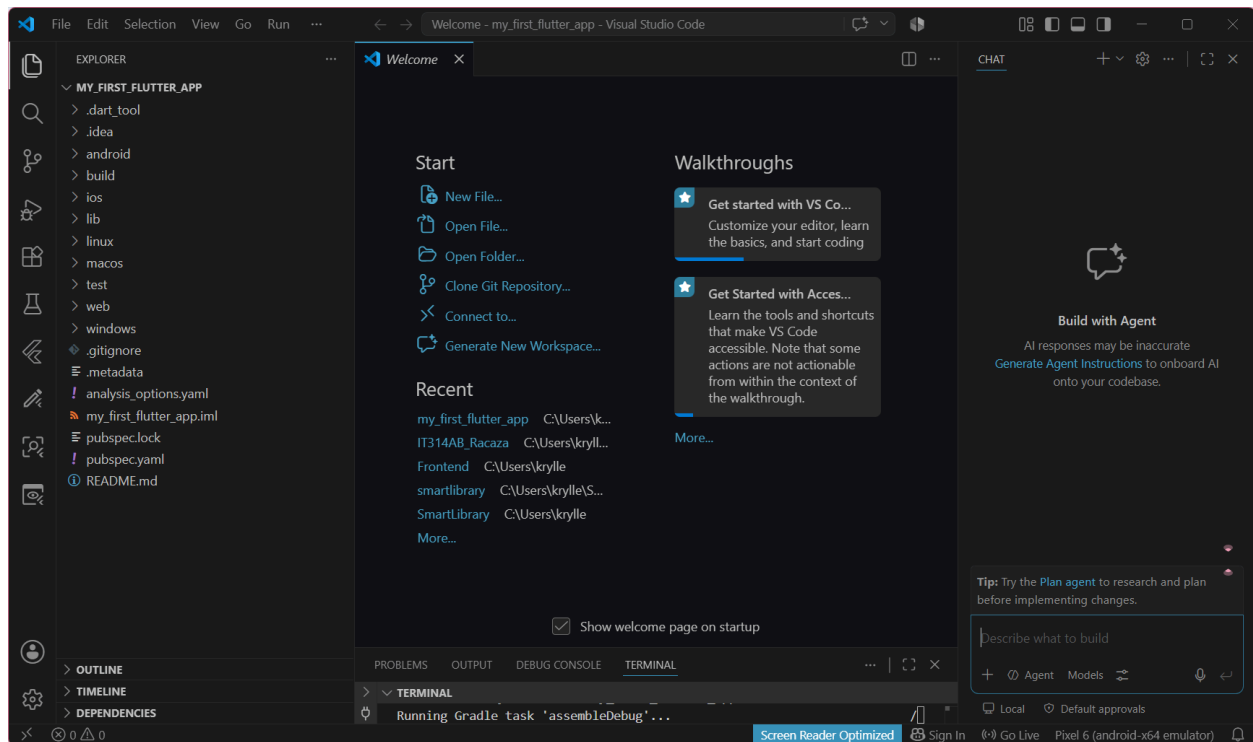

A screenshot of a terminal window titled 'MINGW64:/c/Users/krylle/FLUTTER'. The terminal shows the command 'flutter create my_first_flutter_app' being executed. The output indicates that the project 'my_first_flutter_app' is being created, dependencies are being resolved, and packages are being downloaded. It states 'Got dependencies in `my\_first\_flutter\_app`.' and 'Wrote 131 files.' followed by 'All done!'. It provides links for general documentation, API documentation, and video documentation. It also instructs the user to run the application by typing 'cd my_first_flutter_app' and 'flutter run'. The application code is noted to be in 'my_first_flutter_app\lib\main.dart'. The prompt 'krylle@krylle MINGW64 ~/FLUTTER' is shown at the bottom, followed by a new line starting with '\$ |'.

🚩 Flag 7 – Unlock the Workspace

Objective: Open the project in VS Code.

Screenshot:

- Your project opened in VS Code

🚩 Flag 8 – Launch

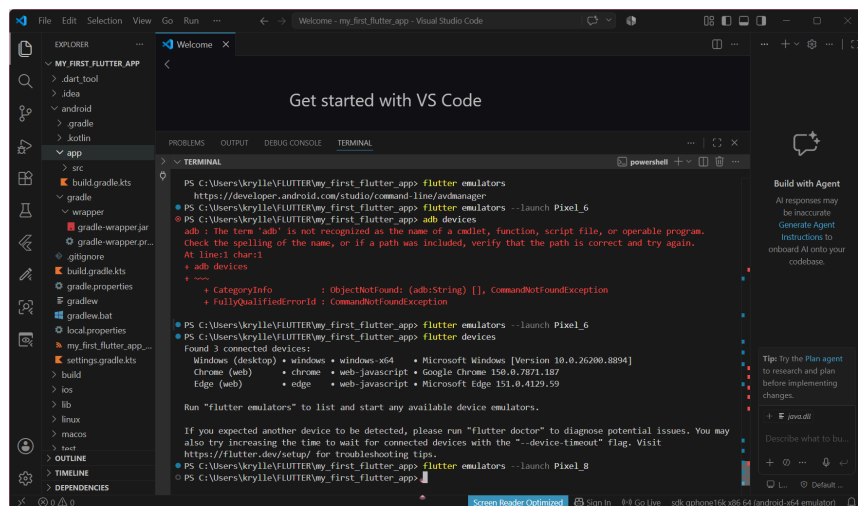

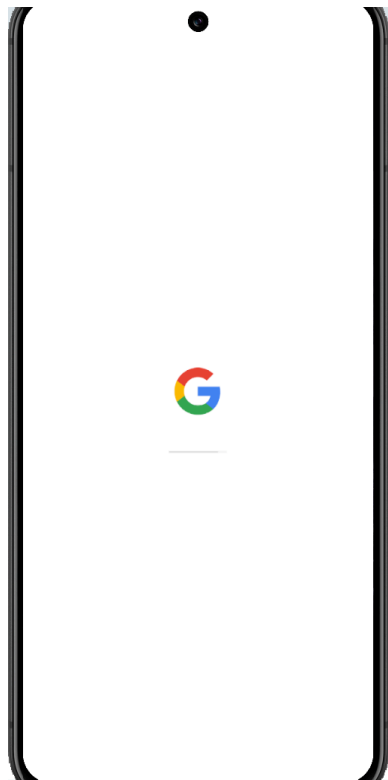

Objective: Run your Flutter application.

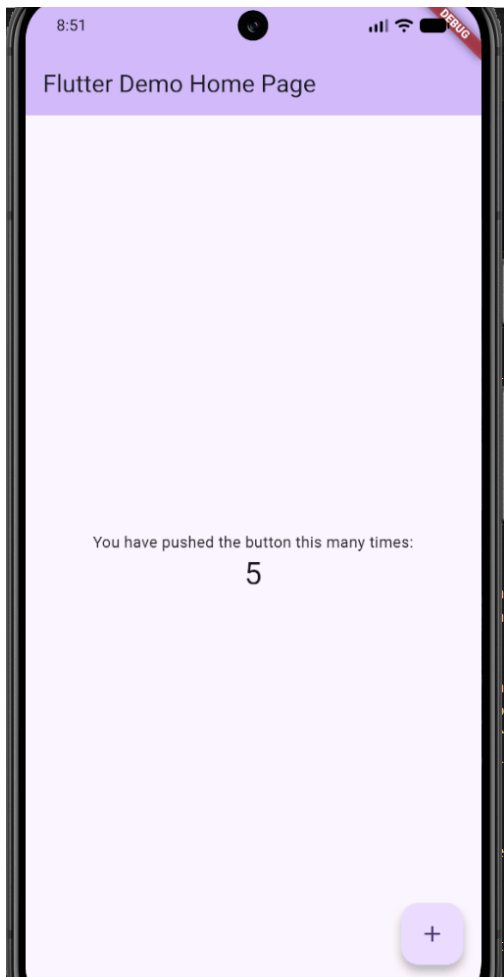

Run:

flutter run

Screenshot:

- Terminal
- Emulator running
- Default Flutter app

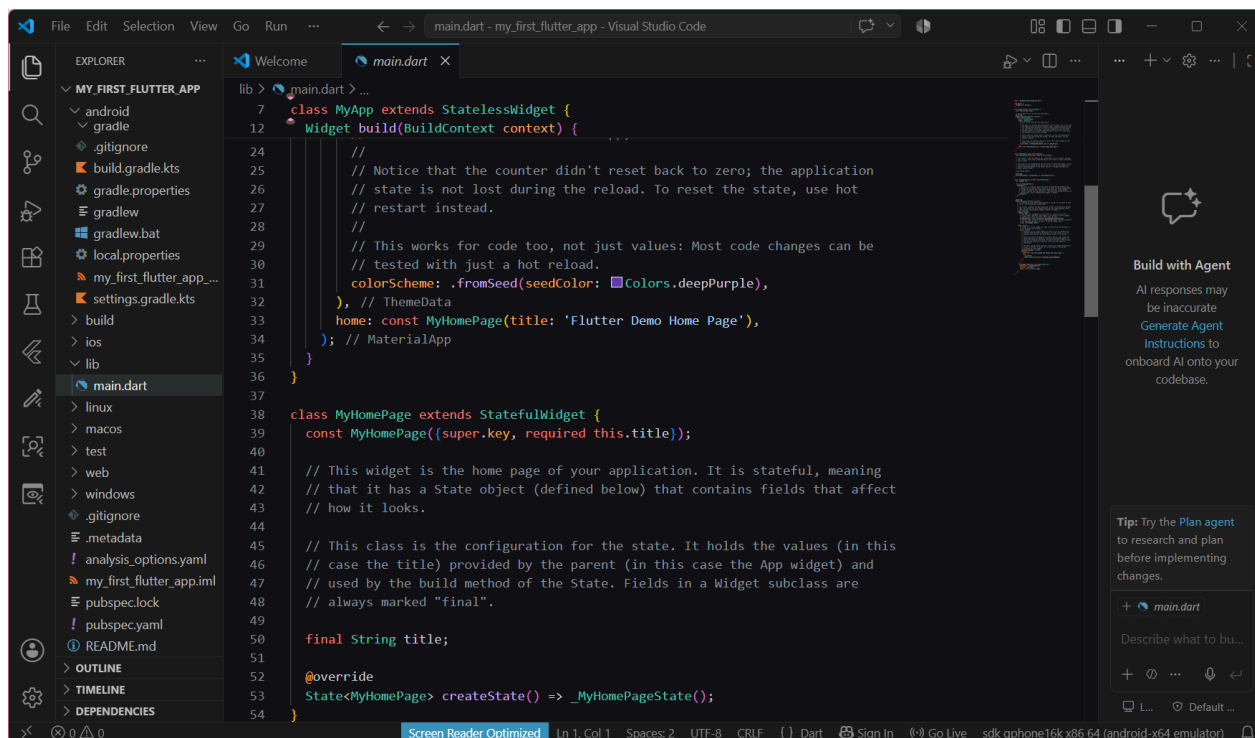

🚩 Flag 9 – Find the Entry Point

Figure out where the default Flutter page comes from.

Screenshot:

- The location of the file where the default page is from (the one showing on the emulator)

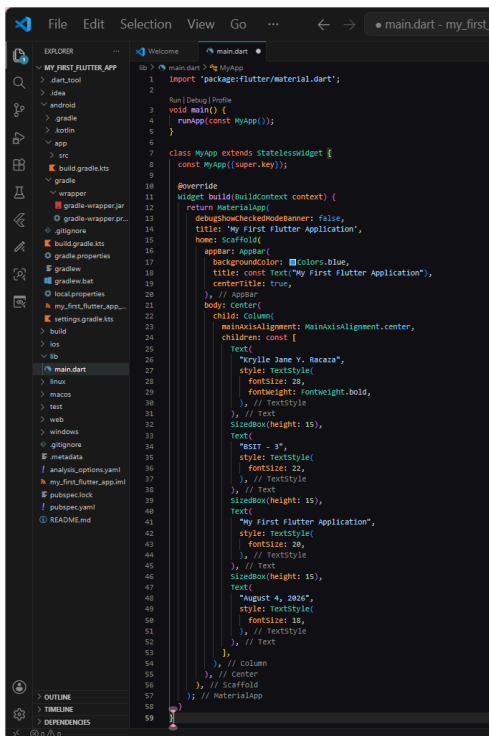

Flag 10 – Claim Your App

Replace the default screen with:

- Full Name
- Course & Section
- "My First Flutter Application"
- Today's Date

Screenshot:

- Your updated content of the code
- The updated UI

```
1 import 'package:flutter/material.dart';
2
3 void main() {
4   runApp(const MyApp());
5 }
6
7 class MyApp extends StatelessWidget {
8   const MyApp({super.key});
9
10  @override
11  Widget build(BuildContext context) {
12    return MaterialApp(
13      debugShowCheckedModeBanner: false,
14      title: 'My First Flutter Application',
15      home: Scaffold(
16        appBar: AppBar(
17          backgroundColor: Colors.blue,
18          title: const Text('My First Flutter Application'),
19          centerTitle: true,
20        ), // AppBar
21        body: Center(
22          child: Column(
23            mainAxisAlignment: MainAxisAlignment.center,
24            children: const [
25              Text(
26                'Krylle Jane Y. Racaza',
27                style: TextStyle(
28                  fontSize: 28,
29                  fontWeight: FontWeight.bold,
30                ), // TextStyle
31            ), // Text
32            SizedBox(height: 15),
33            Text(
34              'BSIT - 3',
35              style: TextStyle(
36                fontSize: 22,
37              ), // TextStyle
38            ), // Text
39            SizedBox(height: 15),
40            Text(
41              'My First Flutter Application',
42              style: TextStyle(
43                fontSize: 20,
44              ), // TextStyle
45            ), // Text
46            SizedBox(height: 15),
47            Text(
48              'August 4, 2026',
49              style: TextStyle(
50                fontSize: 18,
51              ), // TextStyle
52            ), // Text
53          ],
54        ), // Column
55      ), // Center
56    ), // Scaffold
57  ); // MaterialApp
58 }
```

🚩 Flag 11 – Personalize It

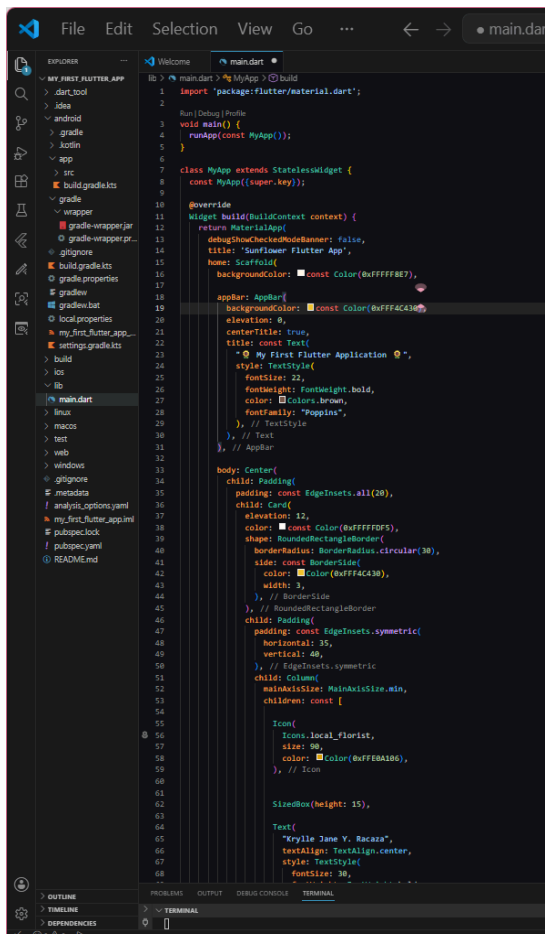

Research and implement at least **three** visual changes.

Examples:

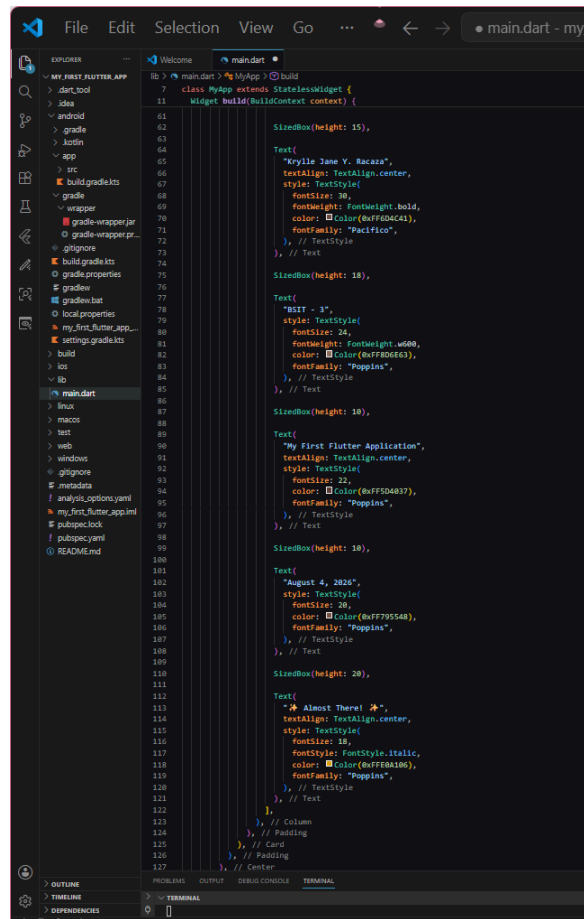

- Change the background colour.
- Change the text colour.
- Centre the content.
- Increase font size.
- Add a border or rounded card.
- Change the font.
- Add an emoji or icon.

Screenshot:

- The code changed for personalizing
- The updated UI

```
1 import 'package:flutter/material.dart';
2
3 void main() {
4   runApp(const MyApp());
5 }
6
7 class MyApp extends StatelessWidget {
8   const MyApp({super.key});
9
10  @override
11  Widget build(BuildContext context) {
12    return MaterialApp(
13      debugShowCheckedBanner: false,
14      title: 'Sunflower Flutter App',
15      home: Scaffold(
16        backgroundColor: const Color(0xFFFFF8E7),
17
18        appBar: AppBar(
19          backgroundColor: const Color(0xFFFF4343),
20          elevation: 0,
21          centerTitle: true,
22          title: const Text(
23            "☀️ My First Flutter Application ☀️",
24            style: TextStyle(
25              fontSize: 22,
26              fontWeight: FontWeight.bold,
27              color: Colors.brown,
28              fontFamily: "Poppins",
29            ), // TextStyle
30          ), // Text
31        ), // AppBar
32
33        body: Center(
34          child: Padding(
35            padding: const EdgeInsets.all(20),
36            child: Card(
37              elevation: 12,
38              color: const Color(0xFFFFF0F5),
39              shape: RoundedRectangleBorder(
40                borderRadius: BorderRadius.circular(30),
41                side: const BorderSide(
42                  color: Color(0xFFFF4343),
43                  width: 5,
44                ), // BorderSide
45              ), // RoundedRectangleBorder
46            child: Padding(
47              padding: const EdgeInsets.symmetric(
48                horizontal: 35,
49                vertical: 40,
50              ), // EdgeInsets.symmetric
51            child: Column(
52              mainAxisAlignment: MainAxisAlignment.min,
53              children: const [
54
55                Icon(
56                  Icons.local_florist,
57                  size: 40,
58                  color: Color(0xFFE8A060),
59                ), // Icon
60
61                SizedBox(height: 15),
62
63                Text(
64                  "Krylle Jane Y. Racaza",
65                  textAlign: TextAlign.center,
66                  style: TextStyle(
67                    fontSize: 18,
68
```

```
7 class MyApp extends StatelessWidget {
8   Widget build(BuildContext context) {
9
10     SizedBox(height: 15),
11
12     Text(
13       "Krylle Jane Y. Racaza",
14       textAlign: TextAlign.center,
15       style: TextStyle(
16         fontSize: 30,
17         fontWeight: FontWeight.bold,
18         color: Color(0xFF008C41),
19         fontFamily: "Poppins",
20       ), // TextStyle
21     ), // Text
22
23     SizedBox(height: 18),
24
25     Text(
26       "BIT - 3",
27       style: TextStyle(
28         fontSize: 24,
29         fontWeight: FontWeight.w400,
30         color: Color(0xFF008C41),
31         fontFamily: "Poppins",
32       ), // TextStyle
33     ), // Text
34
35     SizedBox(height: 10),
36
37     Text(
38       "My First Flutter Application",
39       textAlign: TextAlign.center,
40       style: TextStyle(
41         fontSize: 22,
42         color: Color(0xFF008C41),
43         fontFamily: "Poppins",
44       ), // TextStyle
45     ), // Text
46
47     SizedBox(height: 10),
48
49     Text(
50       "August 4, 2026",
51       style: TextStyle(
52         fontSize: 20,
53         color: Color(0xFF008C41),
54         fontFamily: "Poppins",
55       ), // TextStyle
56     ), // Text
57
58     SizedBox(height: 20),
59
60     Text(
61       "☀️ Almost There! ☀️",
62       textAlign: TextAlign.center,
63       style: TextStyle(
64         fontSize: 18,
65         fontStyle: FontStyle.italic,
66         color: Color(0xFFE8A060),
67         fontFamily: "Poppins",
68       ), // TextStyle
69     ), // Text
70
71     Column(
72       ), // Column
73     ), // Padding
74     ), // Card
75     ), // Padding
76   ), // Center
77 }
78
```

✨ *Almost There!* ✨

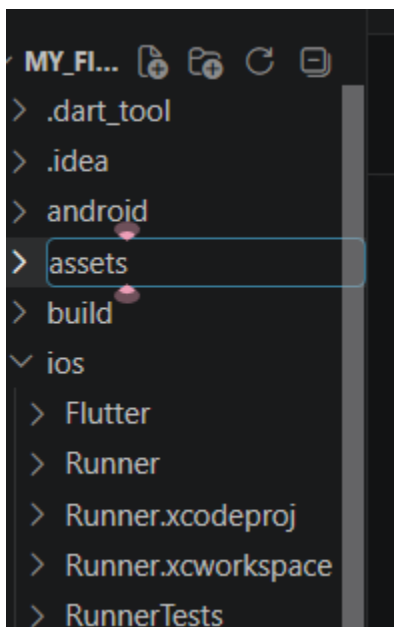

🚩 Flag 12 – Add an Image

Research how to:

- Create an `assets` folder
- Register assets
- Display an image

Screenshot:

- The steps it took to add an image
- The updated UI

```
# The following section is specific to Flutter packages.
flutter:

  # The following line ensures that the Material Icons font is
  # included with your application, so that you can use the icons in
  # the material Icons class.flutter pub get

  uses-material-design: true

  assets:
    - assets/sunflower.png
```
